If you would know the Interest of one Hundred Pounds for one Month, two Months, three Months, six Months, nine Months, or one Year, look for 100 l. in the Side; and in the next Column, under one Month is 8 s. 4 d. for two Months 16 s. 8 d. for three Months 1 l. 5 s. for six Months 2 l. 10 s. for nine Months 3 l. 15 s. and for a Year 5 l. and so of the rest.

This is the honest Way by which Men should  
To Interest let their Silver and their Gold;  
Yet worldly Misers, when to Raking fall,  
They with their Interest get the Devil and all.

Most Sacred Majesty King GEORGE III.

**O**NCE more I venture, not with heroick Strain,  
But leave that Part to young and pregnant Brains ;  
My Instruments are silent, on the Willows hung,  
Till out of Tune, nay useless, quite unstrung ;  
My Age requir'd, my Genius bid me sleep,  
What I lamented for, in Silence keep.  
The first Fruits of our Thanks to Heaven send,  
Then to *Great Britain's* Throne let's humbly bend ;  
Admire the Virtues of our gracious King,  
Of whose wise and steady Conduct let all Men sing ;  
In Words express, whose Virtue doth abate  
The *Gallick* Pride, allays our homebred Hate,  
Guides his great Family as a tender Father,  
Prevents one tacking Mischief on another ;  
All this he doth with a most gentle Rein,  
And without Whip or Spur ; so to obtain  
His good and gracious Ends, for Church and State  
In Safety to protect from Popish Hate.  
Rouse up, brave Hero, there is much remains,  
Our Foes still threat to bind our Souls in Chains.  
Shall our Ingratitude eclipse thy Glory ?  
Let future Ages blush to hear the Story,  
That barbarous Wolves, ~~dull~~ Asses, Apes, and Dogs,  
Shall make Men say, thou casts thy Pearls to Swine.  
Oh ! may thy Virtue, Valour, Patience live,  
Thy foreign and domestick Foes undo ;  
Let their black Projects before thy Lustre fly,  
As Clouds and Fogs to clear the azure Sky.  
Before the Sun's bright Beams, and may the story  
Of *George's* Reign sound *England's* future Glory ;  
And may no Protestant dissent from this,  
To pray for his long Reign, and future Bliss.

It is necessary to be remembered, That by Virtue of an Act of Parliament made in the Year 1751, for Alteration of the Stile, the Beginning of the Year was changed from the 25th of March to the first Day of January. This Change took place on the first of January, 1752; and the Act enjoins and directs, That from and after that Time, every succeeding first Day of January, in every Year to come, shall be the first Day of every Year respectively; and that all Deeds and Writings, of what Nature and Kind soever, shall be dated accordingly.

In Consequence of the same Act of Parliament, the Use of the Julian Account or Old Stile, heretofore followed in this Country ceased on the Second of September of the same Year, 1752; and by dropping or leaving out eleven nominal Days, and calling the next, which would have been the third, the fourteenth, the New Stile took place; and from thence, by the said Act, is directed to be used for all Time to come, in all his Majesty's Dominions subject to the Crown of Great-Britain. By this Alteration, the several fixed or Immoveable Feasts, as they are ordered to be placed in the New Calendar upon the same nominal Days of the respective Months as they were placed upon in the Old, will come eleven Days earlier than they would otherwise have done, and thereby make all Things depending upon them, such as the Opening or Inclosing of common Fields and Pastures, the Holding of Fairs and Marts, the Payments of Rents and Annuities, and the Commencement or Extinction of many private Rights and Matters of Property, do the same: To prevent therefore any Inconvenience arising therefrom, the Act provides and directs, That the Opening or Inclosing of Pastures, the Payments of Rents, Annuities, and all other Things depending on the Fixed or Immoveable Feasts, shall not by this Means be accelerated or forwarded; but that the Days of Opening or Shutting such Pastures, of paying such Rents or Annuities, and of doing such other Matters and Things formerly to be done and performed on the said Feasts, shall be Kept, Observed, and Performed on the same Natural Days of the Year on which the same Feasts would have fallen if this Act had not been made. For this Reason the 5th of April is called Old Lady-Day, and the 10th of October, Old Michaelmas Day, and so of the rest, as being the respective Days on which all such Rents and Payments become due, such Rights take place, and such Matters and Things to be done, and not before. All that is here said relates to the several Things above-mentioned depending on Fixed or Immoveable Feasts; but all such as depend on Moveable Feasts, or on Days depending on them, are to take place, and be reckoned according to the New Calendar, in Pursuance of an Act of Parliament of the Year 1752, for amending the former Act of the Year 1751.

N. B. That all Dates of Births, Deaths, or other remarkable Events in the Royal or Chronological Tables, prior to, or upon the 2d of September, 1752, are to be understood according to the Julian Account, or Old Stile.

# JANUARY hath XXXI Days.

By your Leave, Gentlemen, I only crave  
 A little Room among the rest to have;  
 Vouchsafe your Pardon, and your Patience lend,  
 You'll see how I my vacant Hours do spend.  
 And first of all Jehovah let's implore,  
 To send us better Times than heretofore.

# FEBRUARY hath XXVIII Days.

What means so frequent Prodigies and intense Thunder,  
For two Years past, to many People's Wonder;  
Unusual Corruscations and much Rain,  
High Winds and Land-floods, Scarcity of Grain?  
But of God's Wrath the Effects, mov'd by our Crimes.  
Let's turn to him, and he will mend the Times.

And would you know when the Effects will appear ;  
 Scarcely in this, but the succeeding Year  
 Will manifest the Truth. . Nothing but Sin  
 Can make a Breach, or let Confusion in  
 Upon our begun Settlement. Then let us rest,  
 And let all God's Dealings turn unto the best.

THE brightest of the 7 \*'s is of the third Magnitude, and hath 61 Degrees of Meridian Altitude, and in Colour participates of the ♀ and ♂.

2. The fixed Stars all rise, south and set about 4 minutes sooner every Night than they did the Night before; this considered, the exact Time of their Rising, Southing and Setting for any intermediate Night, not herein noted, may be very easily deduced from these Tables, by inspection only.

To know the Time of the Rising, Southing, and Setting of any Star in this Table, for any Day required, it is but considering how many Hours and Minutes that Star Rises, Souths, or Sets, either before or after the 7 Stars on that Day, and you will have your Desire; observing that in this Table, a stands for after, and b for before.

## Of the ECLIPSES for this Year 1766.

THERE will be four Eclipses to the Inhabitants of this Globe, two of the Sun, and two also of the lesser Luminary the Moon, they will happen in the following Order.

The first is of the Sun on the 9th of *February*, at Noon, but not visible to us by reason of the Moon's great Latitude, but in the southern Parts of the Globe, it will be a great and notable Eclipse.

The second is of the lesser Luminary the Moon, on the 24th of *February*, it will be visible throughout all Europe, as more clearly appears by the following Calculation.

H. M.

The beginning <i>February</i> the 24th	6	40	} In the Afternoon Appar. Time
Middle of the Eclipse	7	46	
The end of the Eclipse is	8	53	
The Whole Duration	2	13	
Digits eclipsed	3	52	

The third is of the greater Luminary the Sun, on the 5th of *August*, and is visible to all *North America*, and almost all Europe, according to the following Calculations.

H. M.

The Eclipse begins the 5th of <i>August</i>	5	18	} Afternoon Apparent Time.
Middle of the Eclipse is	6	21	
End of the Eclipse is	7	11	
Whole Duration is	1	53	
Digits eclipsed are	4	40	

The fourth and last is another of the Moon, and invisible with us at *London*, it comenmes on the 20th of *August*, at 57 Minutes past five in the Morning; the Middle is 19 Minutes past seven; the End is 29 Minutes past eight, but in the whole Continent of *America*, it will be a great and visible Eclipse, with almost 7 Digits dark on the South-side of the Moon.

If you inspect my last Years Almanack you will there find I told you that the Effects of the solar Eclipses would continue in force till the Years 1765 and 1766. and I am of the same Opinion with the rest of the best and most learned Aströlogers; and likewise from History, and my own Experience

rience, that the Eclipses of the Luminaries are the Causes of many Changes that ensue in the World, because their Effects are general powering forth their Influences, not only upon Cities, but even upon whole Regions subject to the Quadrangle (the Sign more especially) wherein the Defect happens, and no less on particular Persons, who have any Affinity in their Genitures with the Schemes of such Eclipses; but to come to the Matter in Hand, the lunar Defect I propose to speak of, happens on *February* the 24th, in the 7th Degree of Virgo, when 4 Degrees of Libra ascends the eastern Horizon, and 5 Degrees of Cancer culminates; Saturn on the Cusp of the 9th; Jupiter and Mercury are in Opposition from the 11th and 5th Houses; the eclipsed Luminary on the Cusp of the 12th, just within the 11th, applying by Square to Mars in the 3d; thus are the Heavens posited at this Lunation; my Author tells me, that an Eclipse of the Moon in Virgo, as this is, causes Diseases and Infirmities to the Great, or Grandees of the Kingdom, and various Seditions and Discords among Men; and I do assume to tell you that Mercury is Governor of this Eclipse, but as he is near in partile Aspect with both the Fortunes, by being in Opposition to the One, and Sextile to the other, and they in friendly Trine to each other, he is thereby rendered conformable to their Natures, which makes me to judge that the Persons under the Dominion of Mercury, *viz.* Merchants, substantial Tradetmen, Mathematicians, Secretaries, nay, even Poets themselves, and all learned Men in general shall have great Success in their different Occupations, and be better rewarded for their Industry and Ingenuity. As unto Mankind, so long as the Effects are in Being, it portends healthful Bodies, it replenisheth the Air with Moisture and Abundance of Showers; the Seas will be more calm; the Merchant's Ships make more happy Returns, and the Trees may yield Plenty of good Fruit, useful for Man, and also for every living Creature.

The third Eclipse is of the Sun on the 5th of *August*, near six in the Evening, when 16 Degrees of Virgo is on the Medium Cæli, and 10 Degrees of Capricorn ascending; Saturn in the 5th, Mercury in the 8th, Mars in the Ascendant, and Jupiter with the two Luminaries, and Venus in the 7th; the Moon hastens to the Opposition of Mars, and the Conjunction

of Jupiter ; this is a very passive Lunation, all the Planets, except Mars are in passive Signs ; he is oriental and angular, and opposes both the Luminaries, therefore Mars has the chief Government of this Eclipse ; and what the Effects are which Mars produceth, you may find, if you peruse my former annual Books ; for though I would have all Things to be plain, and easy to the Capacities of all my Readers, and would have nothing hid that my Genus is able to discover, yet I absolutely hate Tautologies, and cannot bear to tune the same String, and write on the same Subject too often, lest I be blamed as the Carrier was that brought ill News to the Town. We shall all do very well, if in keeping ourselves from the too high Curiosity and Superstition, which misguideth the Sciologists, and many other Ignorants, in these Studies of high Sublimity, we moderate ourselves in the Contemplations of God, by his Works, especially the heavenly Bodies ; for by so doing we shall become good Astronomers, and Christian Astrologers. If I may say, by contemplating the Heavens, and all the Ornament of them, we propose them to us, as the universal Preachers of the Glory of the Sovereign ; and consider them as the high Work of his Hands, as the Royal Psalmist doth exhort us, *Psalms* viii. and *Psalms* xix. and so by the Creation of the Sun, Moon, Stars, and Planets, we shall learn to meditate what Light there is in him, who dwelleth in the inaccessible Brightness, and who is the Father and Fountain of all Lights, as also what Good we are to hope for of him ; for by that Good which the corporal Light bringeth unto us for our Bodies ; and the Sun, Moon, Planets and Stars for the Life of Man, we may in some Sort judge what Felicity is prepared by the divine and spiritual Light for our Souls, and by God our Creator, in whom it abideth ; by which Means, though God hath set them for Signs and Seasons, &c. We shall be armed against their manifold, and sometimes dire Aspects, Positions and Configurations, which often happen, and our own Experience can plentifully Witness.

*Astra regunt Homines, Sapiens dominabitur Astris,  
Est Deus in Cælis, hunc cole, tutus eris,*

Instead of an Hieroglyphic, which I used to put into my annual Book, I shall this Year present you with the Images  
of

of two Parelj, or mock Suns, with part of a Copy of a Letter, which I received from a Gentleman as far as 54 Degrees North: It is thus,

*Worthy Sir,*

“SINCE it hath pleased God to make me an Eye-witness  
 “of an unusual Accident, I would not conceal it from  
 “you: On *Monday* the 1st Day of *April* last, there arose with  
 “the Sun two Parelj, on either Side one, their Distance was  
 “from him by Estimation about 12 Degrees, they continued  
 “still of the same Distance from the Zenith, or Height  
 “above the Horizon that the Sun did; and from the Parts  
 “averse to the Sun, there seemed to issue out certain bright  
 “Rays, not unlike those which the Sun sendeth from behind  
 “a Cloud, but brighter. The Parts of those Parelj, which  
 “were towards the Sun, were of a mixt Colour, wherein  
 “green and red, was most predominant: They continued  
 “visible till about 8 o’Clock, or rather after, then the Clouds  
 “darkned the Sky, and it overcast, and was a rainy Day.  
 “*Sir*, Pray be pleased to write your astrological Judgment  
 “hereupon, and you will greatly oblige your well-wishing  
 “Friend”, M. H. May the 15th, 1765.

Thus far my Friends Letter. I observed it myself, and had much the same Intelligence of it from several Persons in my own Neighbourhood, but they all agreed it might be seen from six till about nine. I believe in about 53 Degrees North.

These Parelj were in the very Degree of the Conjunction of Saturn, and Jupiter in the Degree of the late solar Eclipse, they will irritate their Effects, and likewise they themselves are the Messengers of the Tumults, Treacheries, not of very much Bloodshed, but they foreshew many treacherous great Ones among our Grandees, and a tyrannical Opposition of the People. *Quod deus divertat*; but more in my next.

We are by the Blessing of a gracious God, arrived to the Year 1766, which has been predicted to be a Year ominous to *Europe* in general, and *Great-Britain* in particular: Notwithstanding there will in the Courts of Princes be some underhanded Knaveries, and double-dealing Policies, which will break out in some succeeding Years; yet I do not perceive by my Rules of Astrology that the Accidents of this Year do appear to be written in Characters of Blood, as unto the *English* Nation, but in Mercy; (if our Sins hinder not) so far as we, with our human Knowledge can foresee: but herein we meddle not with the Decrees of the Omnipotent God, who in a manner many times acts contrary to humane Judgments, for we deny fatal Necessity; or that Acts signified from celestial Configurations must necessarily, or unavoidably so happen, or come to pass, as by us predicted. We say, Religion, Reason, Sobriety, and such like Virtues are able to contradict, or lessen the worst Significations of the Stars: He who lives according to the Dictates of the divine Word, is above the Reach of any malignant Effects of the Stars: He who lives a beastial, dissolute, and sensual Life here, upon him, or such Persons the Stars pour down their dire Influence; and he is subject to their male Effects, and puts them in Execution; we only conclude the heavenly Bodies incline, or manifest the temperature of Man to be either virtuous or vitious; but in no wise to compel the Inclinations to be such. We cannot have the candid Acceptance of all Persons to Credit what we write, but let those consider all Arts have their Imperfections, and their Enemies. As there are so many Men, so also various Minds and Judgments, new Doctrines do arise daily, while each Man judges his own Way best, and most perfect; no Certainty can be found in humane Judgments, all Truth is to be found in Divinity, and sacred Scripture, and yet all profess it not alike. There is hardly any Portion in Scripture, but some conceited Brain will vary therein, from the sober Judgment of grave Divines, &c.

The great Conjunctions of great Stars,  
 Eclipses of Sun and Moon,  
 Do threaten Famines, Dearth and Wars,  
 If we repent not soon.  
 Now God above, and Wrath above,  
 And Heaven above relent;  
 And Man beneath, and Sin beneath,  
 And Earth beneath repent.

And

And *Nostradamus*, whom one of the greatest Wits of the last Age, thus characterizes, and says, that God Almighty had chosen him among the common Sort of Christians, to impart unto him the Knowledge of many prodigious and extraordinary future Things, has a Prophecy alluding to the present Times, in his first Century, and 52d Page.

Soubs un la paix, par tout sera clemence,  
Mais non long temps, pelle & rebellion,  
Par refus Ville, Terre, & Mer entamee,  
Morts & Captifs le liers d'un Million.

*Which I render thus into English ;*

Under One shall be Peace, and every where Clemency,  
But not along while, then shall be plundering & Rebellion,  
By a Denial shall Town, Land and Sea be assaulted,  
There shall be Dead, & taken Prisoners the 3d part of a Million

#### ANNOTATIONS.

The Words and Sense are plain, and so I leave them to my Readers Judgment and Wisdom to interpret as they please.

I now hasten to give you my Judgment of the four Quarters of the Year. And first,

#### Of the Brumal or Winter Quarter.

**T**HIS Quarter begins on *Saturday* the 21st Day of *December*, 1765. at 26 min. past Noon, at which Time 6 deg. of *Capricorn* culminates, and 16 deg. of *Aries* ascends : *Saturn* is in the 2d in platic Square to *Jupiter* in the 6th, which will cause a Murmuring, and Dis-satisfaction of the Commonality towards their Superiors ; and *Mars* in the 7th, the *Moon* in the Ascendant in 26 deg. of *Aries*, in Application by a Trine to the *Sun* in the 9th ; *Mars* and the *Moon* are the only angular Planets at this Ingress ; *Mars* receives the *Moon* in his own domal Dignity ; and *Mars* is in *Scorpio* his other Dignities ; therefore I hope we shall have a good Understanding between the King and the superior Class of Subjects ; though I fear the common People will be Fickle, ever wavering, and going out of one Opinion into another ; but as we in *England* do enjoy Peace, while some other Nations labour under much Misery, Devestation, and Distraction, we desire God in Mercy would continue this our Happiness for many

many Years, and preserve us from such Calamities and Afflictions, which Thousands at this Time are forced to suffer; As to the Weather this Quarter it is naturally cold and moist, and therefore unpleasant to Travellers by Land, or Voyages by Sea, and unto aged Persons it is very noxious and troublesome, causes Superfluity of raw Humours, and Abundance of cold Moisture to overflow their Bodies, to their great Grief, and disquiet of Mind.

Why, asks Minerva, what most want to know,  
How Things shall waddle on this Orb below;  
Why the Times are bad, and Troubles on us brings,  
That comely Bird Content, hath made her Wings:  
She's taken Flight unto another Place,  
And drawn herself into a narrow Space;  
Nor can't be view'd as formerly she's been,  
There's very few her Favour now can win.  
Courtship seems comely, Favour proves but vain,  
'Tis easy lost, but seldom turns again.  
Plain-dealing now seems like a Looking-glass,  
Nay rather like the pale cut withered Grass;  
A real Friend is hard enough to find,  
Yet not so hard as such as prove unkind;  
There's two to One, nay Plenty in Degree,  
Of Trimmers, Turncoats, more than Honesty;  
Of Frauds, Deceits, and Villanies so course,  
And thus by Custom our bad World grows worse.

## II. Of the Spring Quarter.

THIS Spring Quarter takes it beginning on *Thursday* the 20th day of *March*, at 17 min. past 2 in the Afternoon, at which Time 6 deg. and a half of *Taurus* culminates, and 21 deg. of *Leo* ascends, and the Planets are exhibited as in the following Scheme. Saturn is in the 10th, just entered *Gemini*, in Sextile to the Sun; Jupiter is in the 12th; Mars in the 6th; Venus in the 9th, and Mercury in the 8th; the Moon in the 12th, applying to the Trine of Mercury, and Sextile of Saturn.

Now as to Astrologers making their Judgments of future Events from the Motions and Configurations of the heavenly Bodies,

Bodies, they are (as one observes) semblable to Lawyers, who tho' they see good Reason to be confident on their Clients behalf, yet cannot warrant their likeliest Cause to have answerable Effect, since a superior Judge must determine it. And he may (and will for any Thing they know) over-rule the Cause as he pleaseth : so Astrologers of never so profound a Judgment,

do sometimes fail in their Predictions, because God Almighty, the Judge of all Things, can alter the Cause of Nature when he pleaseth, and thereby let us see the Wisdom of this World is Foolishness, and will not always suffer the heavenly Bodies to work their Effects. However, according to the genuine Rules of Art, I shall venture to give my Judgment of the remaining Part of this Year, (tho' more principally upon the Spring Quarter) from the Positions of the Heavens above specified. In which I find Jupiter in Leo, in platic Trine to the Sun, and Venus in Aries, *England's* Ascendant, and likewise a Sextile of the Sun and Saturn, and also a Conjunction of the Sun, Venus and Mercury, a little after the Ingress, which

which portends Peace and Tranquility to those Countries signified thereby, to which the Position of the Heavens at the Time of the New Moon preventional well agrees, so that in Fine there can be no ill Conclusions drawn from these Positions, all tending to Peace and good Neighbourhood; and few or no Distempers now of any malignant Nature happens to Mankind, if any Thing it is Colds, and other Distempers of the Breast and Lungs, and but of little Injury, and small Continuance.

The Positions of the Planets also produce a forward Spring and a fruitful Time to follow, though before the Month of *March* expires, or at least the beginning of *April*, Venus, Mercury and the Sun casts their envious Squares to Mars, which imports muttering of some troublesome Spirits, busy Undertakers of new Disturbances, which brings themselves, and Neighbours to inevitable Ruin; and likewise declares discontent both to Governors and People of several southern countries, and some of the North too; there are several Things clouded under the Notion of Justice, or desire of Reformation, which proves in the End an occasion of Mutiny and Disturbance, but may not appear visible till about the autumnal Equinox, or a little before; the Planets then are direct in Motion, and will put forward the ill Effects before specified, but these Aspects are of much less Force than the Conjunction of Saturn and Jupiter in Aries in *March*, 1762. The Effects whereof do more visibly appear, and yet more in a few succeeding Years, for Matters intended by these Conjunctions in the fiery Trigon, are Quæda Generalia; certain general Things appertaining to Mankind in some few Years to ensue. They signify no less than the Constitutions and Revolutions of Empires, Monarchies, &c. They declare in some Countries great Barrenness, however in this great Conjunction, I conceive, that generally the Intentions and Actions of Men, will be wholly to settle, or unjoin the Laws, Constitutions and Customs of whole Nations, Governments, Kingdoms and Common-Wealths.

There is (as one well observes) much Knowledge of the future general Contingencies of this World, in rightly apprehending of, or judging the Effects, which may succeed from the Conjunction of the two Superiors, Saturn and Jupiter.

Nothing

Nothing is without Order, either in the superior, or elementary World ; above us in the Heavens, there are Angels and Archangels ; below those Heavens, Angels or Spirits inferior, (as wise Men believe :) There are also Intelligences : There are also in their several Orbs, superior and inferior Planets : Upon Earth there are Kings and Subjects ; therefore the Effects of this great Conjunction (as others in this Kind in former Ages has sufficiently manifested to the World) puts Matters out of Frame ; the Grandees of the World at high Variance ; from which proceeds Wars, Blood, and all manner of Hostilities ; the Subversion, and utter Extirpation of Kingdoms, Monarchies, &c. And those that live till about the Year 1772, or perhaps a little longer, may see much to this Purpose, but as the Years come on, more may be expected, if God spare my Life and Health ; in the mean Time let us express our Thankfulness to Almighty God, by our future Obedience to his Holy Laws, and humbly to embrace the glad Tidings of his Holy Gospel. *Amen.*

**T**HE Summer Quarter begins on *Saturday* the 21st of *June*, at 41 min. past Noon.

**T**HE Autumnal Quarter begins on *Tuesday* the 23d day of *September*, at 2 min. past two in the Morning, but designing my Judgments of the Spring Quarter, and according to a known Rule in Astrology, to serve for the whole Year : I will bid you Farewell, God willing, to another Year.

Thus Years revolve, and every Thing doth turn  
In Order, till it Sleep within the Urn,  
Of pale Oblivion. To th' Center all Things tend,  
Poor Almanacks ! Nay, the World itself must end.
